

Collaborating with the Initiative

■ *Research, Teaching, and Scholarship*

As a community of scholars we want to ensure that every student in our university has the opportunity to participate in and contribute to our research mission. Through encouraging faculty to include a curriculum-based research experience for students in first year classes, we support faculty to synthesize and enliven their research and teaching.

■ *Collaboration*

To get involved you can:

- Design a discipline-relevant discovery or creation experience for students that includes all three elements of the **research arc**;
- Consult with the curriculum design specialists at the **Gwenna Moss Centre for Teaching Effectiveness**
- Document your curriculum-based research plan online at:
fluidsurveys.usask.ca/s/curriculum-based_UGR/
- Select a U of S student or students to be hired as **research coach** for your class section;
- Access and share information as a member of the **Community-of-Action** through our PAWS group and in-person events;
- Participate in regular **program evaluation** mechanisms, and/or the **Scholarship of Teaching and Learning** to advance inquiry-based education on our campus and across post-secondary populations.

■ *Research Arc*

Our university's research, scholarly, and artistic works are having a significant impact in Saskatchewan and around the world. As our university embarks on a second century of discovery, we are building on a dynamic research and artistic culture that creates knowledge, and enriches our students' scholarship.
